The Drinking Water Safety Act Self Assessment or Qualified Person Checklist

Revised: September 18, 2018

Section 1: Owner Information

Owner Water System	
Operator Water Syster	
Owner Mailing Address	
Town/ City	Province Postal Code
Email	Phone/ Cell
Section 2: Water Sy	
Public Water	System (PWS) PWS Code # (i.e. 123.00)
Semi-Public Water	System (SPWS) SPWS Code # (i.e. 1000.00)
Operating License #	Seasonal? Yes No N/
Section 3: Assesso	Information (please fill this out even if Self Assessment)
Name	
Company	
Email	Phone/ Cell
Section 4: Certificat	<u>ion</u>
The information contain	ed in this report is complete and accurate to the best of my knowledge.
Signature of Owner of	r Owner's Representative Date

Personal information is collected under the authority of The Drinking Water Safety Act and its pursuant regulations, and is used to issue permits and licenses, and for enforcement purposes. Information collected is protected by the privacy provisions of The Freedom of Information and Protection of Privacy Act. If you have any questions, contact the Access & Privacy Coordinator, 200 Saulteaux Crescent, Box 85, Winnipeg MB, R3J 3W3.

Checklist: Groundwater Under Direct Influence (GUDI)
ection 5: Suggestions or Recommendations for Improvements (please don't leave blank

Section 6: GWX System - Description

•		•				
Type of Water System Co	nnections:	☐ Hospital/ Healt	h Care Centre	□ A _I	partments/ Condos	
☐ Year-round Residential		☐ Restaurant/ Fo	od Establish.	☐ Day Care Facility		
☐ Seasonal Cottages		□ School		□ R	ec./ Community Centre	
RV Hook-ups		☐ Personal Care	Home		ther:	
Open Campsites/ Stan	dpipes	☐ Seniors Manor	/ Apartments	Γ		
Average # People Served	per Day]		
Peak # People Served pe	r Day					
# Building or Service Con	nections (in	clude standpipes)				
WATER USE: PROVID	E UNITS! (volume water/ time)	i.e. Liters, cub	ic mete	ers, US or Imperial gallons	
Average Day Demand					on't just write "gallons".	
Average Day Demana				1	US gallon = 3.785 L	
	☐ Metered	d	d 	1	Imp gallon = 4.546 L	
Peak/ Max Day Demand					Note	
	☐ Metered	d Estimate	d		This is not the same information sent to the Groundwater section	
Peak Hourly Flow					for the Manitoba Government	
	☐ Metered	d Estimate	d		for annual water usage.	
Additional comments:						
Schematic or Flow Diagra	m: 🗆 A	44 - ala a 4/a				
Please attach a schematic		uttachment/s	evetom			
only for the water treatmen			system,			
Distribution system maps	are <u>not</u> requ	uired.				
If you are physically mailir for your own records.	ng a hand-di	rawn hardcopy to th	e Office of Drin	king W	ater, please keep a copy	

Section 7: GWX System - General Information

Is your system currently under a drinking water advisory?	Yes No	□ N/A
If yes, what type of advisory? (i.e. Boil Water, Water Quality - Arsenic). Type:		
If yes, when was it issued? Date:		
il yes, when was it issued: Date.		
If the system is under an advisory, are water users notified and public areas posted with the advisory notice?	Yes No	□ N/A
Are all water system components (wells, water treatment plant, storage tanks, pumps, etc) adequately protected from vandalism?	Yes No	□ N/A
Is the water treatment plant locked?	Yes No	☐ N/A
Has the water treatment plant site ever been flooded?	☐ Yes ☐ No	□ N/A
Can water supply be maintained during power outages?	Yes No	□ N/A
☐ Yes, standby generator (genset) ☐ Yes, fuel-driven pump		
How many electrical power outages per year or per season?		
Standby generator (genset) or fuel-driven pump located above the reservoir?	☐ Yes ☐ No	□ N/A
If yes, is it in a metal or epoxy coated box to protect the reservoir from spills?	☐ Yes ☐ No	□ N/A
Does the system experience frequent <u>water</u> outages due to equipment failures or water supply capacity issues?	Yes No	□ N/A
System experienced failures in the past of treatment/ disinfection equipment?	☐ Yes ☐ No	□ N/A
Is the water system equipped with flow meters to monitor water use?	Yes No	□ N/A
☐ Raw water ☐ Treated water ☐ Blended water ☐ Backwash water		
☐ Rural distribution water ☐ Town distribution water ☐ Bulk/ truck/ pail fill w	vater	
Are water service connections metered?	☐ Yes ☐ No	□ N/A
System able to meet peak water demands with adequate at-tap pressures?	Yes No	□ N/A
What is the rated treatment or design capacity of the water treatment system? Units.		
What is the peak or maximum day demand on the water system? Units.		
Is the water treatment plant or pumphouse equipped with an alarm system?		
☐ Yes, local alarm/ exterior light only ☐ Yes, sent to operator ☐ No ☐ N	/A	
What alarm conditions are monitored?		
☐ Distribution pump failure ☐ Low reservoir level ☐ Power failure	UV failure	
☐ Chlorination pump failure ☐ High reservoir level ☐ Building flood		
☐ Low chlorine residual ☐ Low incoming pressure ☐ Intrusion		
☐ High turbidity ☐ Low distribution pressure ☐ Other:		

Section 7: GWX System - General Information

Is the water system equipped with a suitable <u>raw</u> water sampling tap?	☐ Yes	☐ No	☐ N/A
Is the water system equipped with a suitable <u>treated</u> water sampling tap?	☐ Yes	☐ No	□ N/A
Is the water system equipped with other sampling taps between treatment units?	☐ Yes	☐ No	□ N/A
Are there any obvious cross-connections within the piping between raw, partially treated, treated, or distributed water?	☐ Yes	☐ No	□ N/A
Are there any by-passes around critical treatment equipment or treatment processes such as a cartridge filter, or a UV unit?	☐ Yes	☐ No	□ N/A
Are these by-passes tagged or labelled?	☐ Yes	☐ No	□ N/A
Are there procedures for activating by-passes including DWO notification?	☐ Yes	☐ No	□ N/A
Does the system provide appropriate water treatment given the type of raw water source and the raw water quality?	☐ Yes	☐ No	□ N/A
Does the system receive frequent or repeated complaints from water users about water quality?	☐ Yes	☐ No	□ N/A
Describe redundancy level in the water supply, treatment, storage and pumping s	ystems.	(i.e. 2 w	/ells)
Was the system designed by a Professional Engineer?	☐ Yes	☐ No	□ N/A
Was the system designed by a Professional Engineer? Was the system approved by the Office of Drinking Water?	☐ Yes	☐ No	N/A
Was the system approved by the Office of Drinking Water? Owner/ operator aware of the need to obtain approval (i.e. permit) before starting treatment upgrades or significant alterations to the system?			
Was the system approved by the Office of Drinking Water? Owner/ operator aware of the need to obtain approval (i.e. permit) before	Yes	☐ No	□ N/A
Was the system approved by the Office of Drinking Water? Owner/ operator aware of the need to obtain approval (i.e. permit) before starting treatment upgrades or significant alterations to the system? This includes watermain extensions. Is the installation of treatment equipment or disinfection equipment required by	Yes Yes	□ No □ No	□ N/A □ N/A
Was the system approved by the Office of Drinking Water? Owner/ operator aware of the need to obtain approval (i.e. permit) before starting treatment upgrades or significant alterations to the system? This includes watermain extensions. Is the installation of treatment equipment or disinfection equipment required by the Office of Drinking Water as noted in an advisory letter or inspection letter?	Yes Yes	☐ No ☐ No ☐ No	
Was the system approved by the Office of Drinking Water? Owner/ operator aware of the need to obtain approval (i.e. permit) before starting treatment upgrades or significant alterations to the system? This includes watermain extensions. Is the installation of treatment equipment or disinfection equipment required by the Office of Drinking Water as noted in an advisory letter or inspection letter? Adequate space in the building to install additional treatment equipment?	Yes Yes Yes	No No No	 N/A N/A N/A N/A
Was the system approved by the Office of Drinking Water? Owner/ operator aware of the need to obtain approval (i.e. permit) before starting treatment upgrades or significant alterations to the system? This includes watermain extensions. Is the installation of treatment equipment or disinfection equipment required by the Office of Drinking Water as noted in an advisory letter or inspection letter? Adequate space in the building to install additional treatment equipment? Are key water pipes, valves, taps, and components labelled to assist with O&M?	 Yes Yes Yes Yes Yes Yes	No No No No No	N/A

Section 7: GWX System - General Information

Any changes, upg	grades,	or expansions to the sy	stem since the last assessm	ent? Nes	☐ No	□ N/A
If yes, explain:						
What is the average	ge age	(years) of the following	components of the system?			
Supply (i.e. well)						
Treatment						
Storage						
Distribution						
At inspection time	, were	all water system compo	nents in good working order	? Nes	☐ No	□ N/A
If no, explain:						
What is the gener	al cond	dition of the buildings?	☐ Good			
				ng end of use		
Additional commo				cement requ	ea	
Additional comme	ents.					

Section 8: GWX System - Wells (complete one checklist for each well)

☐ Attachment: well driller's report (well log) ☐ Not Available		
Well Name: (if applicable)		
Well Identification Tag Number:		
Type of well: Small diameter drilled well Large diameter dug well		
☐ Large diameter drilled well ☐ Sand point (driven) well		
How is the well being used?	су	
Does the well have a watertight casing to a depth of at least 15 m (50 feet)?	☐ Yes ☐ No	□ N/A
Is there at least 3 m (10 feet) of low permeability soil (i.e. clay or till) above the casing depth to protect the water bearing zone from contamination?	☐ Yes ☐ No	□ N/A
Is the annular space between the casing and the ground sealed with grout, clay, or bentonite?	Yes No	□ N/A
Does the well casing extend at least 0.45 m (18 inches) above the ground or 0.30 m (12 inches) above the pumphouse floor?	Yes No	□ N/A
Does well bacteria history suggest it is secure from contamination?	☐ Yes ☐ No	□ N/A
Are there periodic changes in water quality?	☐ Yes ☐ No	□ N/A
Is the wellhead accessible for inspection and maintenance?	☐ Yes ☐ No	□ N/A
Is the well constructed with a pitless adapter? (i.e. no well pit)	☐ Yes ☐ No	□ N/A
If the well is located in a pit, does it appear to provide a watertight boundary complete with a sanitary seal?	Yes No	□ N/A
Is the wellhead fitted with a secure, watertight lid/cap with all openings sealed?	☐ Yes ☐ No	□ N/A
Is the wellhead protected from damage from vehicles, animal access, etc.?	☐ Yes ☐ No	□ N/A
Does the ground slope away from the well?	☐ Yes ☐ No	□ N/A
Are there any trees, bushes, or tall grass that may impact the wellhead?	☐ Yes ☐ No	□ N/A
What is the nature of surrounding land use within approximately 100 m (300 feet)	of the well?	
☐ Urban/ Residential ☐ Cottages/ Recreational ☐ Agricultural/ Crop Produc	tion	
☐ Commercial ☐ Natural/ Undeveloped ☐ Agricultural/ Livestock		
How close is the nearest natural water body or water course?	00 feet)	
(i.e. lake, river, stream, creek)	(100 - 300 feet)	
☐ 101 m to 200 n	n (300 - 600 fee	t)
over 200 m (60	00 feet)	

Section 8: GWX - Wells (complete one checklist for each well)

Any potential sources of contamin	ation within 30 m (100 feet) of the	wellhead? Yes No N/A
☐ Sewage/ septic holding tank	☐ Landfill site	☐ Abandoned/ unsealed wells
☐ Septic field	☐ Petroleum storage area	Local overland flooding area
☐ Sewer main/ pipe	☐ Chemical storage area	Overtopped well in past
☐ Greywater field or pit	☐ Feed/ grain storage area	Other:
Livestock area	☐ Herbicide/ fertilizer apply area	
☐ Manure storage area	☐ Excavations or gravel pits	Char.
	☐ Dugouts	Other:
☐ Composting site	☐ Drainage ditches	
Does the well have adequate capa	acity to meet demands?	☐ Yes ☐ No ☐ N/A
What is the capacity of the well pu	umping system? Units.	
What is the peak or maximum day	demand on the water system? Ur	nits.
How is the well pump controlled?		
☐ Distribution pressure switch [☐ Storage tank level ☐ Other:	
Is there ASME pressure tank/s to	reduce pump cycling?	Yes No N/A
What is the average age (years) of	of the raw water supply?	
Supply (i.e. well)		
What is the general condition of the	ne raw water supply?	od
	☐ Faiı	r - nearing end of useful life
	☐ Poo	or - replacement required
Additional comments:		
Attachment/s:		
Attachment/s: Please attach a sketch or may	showing well(s) and approximate	distances to any
potential sources of contamina	ation, and to the water treatment p	lant or pumphouse.

Section 9: GWX - Iron/ Manganese Filter

☐ Section is Not Applicable to this System.				
Is an aerator used to oxidize iron, manganese, or arsenic?		☐ Yes	☐ No	□ N/A
Is a chemical oxidant applied to assist with iron, manganese, or arsenic re	emoval?	∐ Yes	☐ No	□ N/A
If yes, which chemical? (i.e. chlorine, potassium permanganate, ozone)				
If yes, what is the target dosage? (mg/L)				
Is the rated capacity of the filters able to meet peak or maximum day den	nands?	☐ Yes	☐ No	□ N/A
What is the capacity of the filters? Units.				
What is the peak or maximum day demand on the water system? Units.				
What type(s) of media are in the filter? (layers)	Othe	er:		
☐ Anthracite ☐ Carbon ☐ Sand ☐ Greensand ☐ Gravel				
Can the filters be visually inspected for maintenance and repair?		☐ Yes	☐ No	□ N/A
Are the filters regularly inspected?		☐ Yes	☐ No	□ N/A
Inspection frequency for the filters?				
Has the filter media ever been replaced or topped up?		☐ Yes	☐ No	□ N/A
If yes, how long ago?				
Can head loss be determined for the filters?		☐ Yes	☐ No	□ N/A
Are the filters regularly backwashed?		☐ Yes	☐ No	□ N/A
Backwash frequency for the filters?				
What is the trigger to initiate a backwash? (time, pressure loss, turbidity)				
Is the backwash flow rate adequate?		☐ Yes	□No	
What is the source of backwash water? Filtered and chlorinated water	er			
☐ Filtered and unchlorinated w	ater [] Raw v	vater	
How is the backwash disposed of?				
☐ Municipal sewer system ☐ Holding tank or septic system	☐ Othe	er:		
☐ Discharged to environment				
If the backwash disposal is to sewer or drain, is there an air gap? (i.e. there is no direct connection to avoid backflow)		☐ Yes	☐ No	□ N/A

Section 9: GWX - Iron/ Manganese Filter

☐ Section is Not App	plicable to th	nis System.					
Does the filter system h	ave an air re	lease valve, p	ressure re	elief valve, or	both?	Yes No	□ N/A
Is there a suitable samp	le tap for wa	ter leaving the	filters?			Yes No	□ N/A
Are iron and/or mangan	ese levels re	gularly monito	red?			☐ Yes ☐ No	□ N/A
If being used for arsenic	c removal, ar	e arsenic leve	ls regular	ly monitored?	•	☐ Yes ☐ No	□ N/A
What were the iron and	manganese	levels (mg/L)	in the raw	and filter wa	ter at tin	ne of the inspec	tion?
Iron - raw	Mangar	nese - raw					
Iron - filtered	Mangar	nese - filtered					
What was the arsenic (r	mg/L) level in	the raw and t	reated wa	ater in the mo	st recen	t chemistry repo	ort?
Arsenio	c - raw			Arsenic - tr	eated		
What is the removal rat	e (%) for ars	enic?					
What is the average ago	e (years) of the	he filtration eq	uipment?				
Filtration							
What is the general con	dition of the	filtration equip	ment?	☐ Good			
				☐ Fair - ne	earing er	nd of useful life	
				Poor - re	eplacem	ent required	
Additional comments:							

Section 10: GWX System - Water Softener

☐ Section is No	ot App	olicable to this	System.			
Is there a bypass t	o allo	w blending of so	oftened and un-soft	ened water?	☐ Yes ☐ No	□ N/A
SPWS: is there a s	separa	ate un-softened	water tap provided	for drinking water?	☐ Yes ☐ No	□ N/A
How often (freque	ncy) is	s the softener re	egenerated? Units.			
How is the regene	ration	frequency set?	☐ Based on	volume of water tre	ated Timed	
			☐ Other			
What is used to re	gener	ate the resin?	☐ Sodium chlori	de		
Is the salt used for	· regei	neration food gra	ade and NSF 60 ce	ertified?	☐ Yes ☐ No	□ N/A
Has the resin ever	unde	rgone a chemic	al clean with an ac	id solution?	☐ Yes ☐ No	□ N/A
Where is the waste	e brine	e discharged aft	er regeneration?			
☐ Municipal sewe	er [☐ Holding tank o	or septic system	☐ Discharged to e	environment	
If the brine disposa (i.e. there is no dire			• .)?	☐ Yes ☐ No	□ N/A
What is the averag	je age	(years) of the s	softening equipmer	nt?		
Softener						
What is the genera	al con	dition of the soft	ening equipment?	Good		
				_	end of useful life	
				Poor - replace	ement required	
Additional comme	nts:					
1						

Section 11: GWX System - Cartridge Filters (single or bank of micron filters)

☐ Section is Not Applicable to this System.
How is the filtration equipment being used? Turbidity control Pre-treatment filter
UV Pre-treatment filter
Are the filter housings and cartridge filters NSF certified? $\ \ \ \ \ \ \ \ \ \ \ \ \ $
If yes, to which NSF standards? (i.e. 53, 60, 61)
Is the rated capacity of the filters able to meet peak or maximum day demands? \(\subseteq \text{Yes} \subseteq \text{No} \subseteq \text{N/}
What is the capacity of the filters? Units.
What is the peak or maximum day demand on the water system? Units.
Can pressure loss across individual filters be monitored?
Are spare cartridges kept on-hand?
Are cartridges changed as per manufacturer's requirements? (i.e. pressure loss) Yes No N/
LIST ALL CARTRIDGE FILTERS IN THEIR ORDER IN THE TREATMENT PROCESS.
Manufacturer's Trigger and trigger value Change out listed max. to change filter frequency pressure loss (psi) (pressure loss, time, turbidity) (days)
Cartridge #1 Cartridge #1
Cartridge #2
Cartridge #3
Cartridge #4
Is there a suitable sampling tap for water leaving each filter?
Is there a suitable sampling tap for the final filter effluent? $\ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \$
Are the filters equipped with an air release valve, pressure relief valve, or vent? \square Yes \square No \square N/A
What were the turbidity levels (NTU) in the raw and filtered water at time of the inspection?
Turbidity - raw Turbidity - filtered
Does the system use pre-coagulation?
If yes, which chemical?
If yes, what is the target dosage? (mg/L)

Section 11: GWX System - Cartridge Filters (single or bank of micron filters)

☐ Section is No	ot App	plicable to this System.			
Are cartridge filters used as a primary barrier? i.e. turbidity standard applied				☐ Yes ☐ No	□ N/A
Is the final stage cartridge filter rated at 1 micron absolute?				Yes No	□ N/A
Does the 1 micror removal of <i>Crypto</i>		olute filter carry certification to NSF idium and Giardia?	Standard 53 for	☐ Yes ☐ No	□ N/A
Is the final stage of before returning the		ge filter flushed after changing out t er to service?	he filter and	Yes No	□ N/A
What is the average	ge age	e (years) of the filtration equipment	?		
Filtration					
What is the gener	al con	dition of the filtration equipment?	Good		
			Fair - nearing e	end of useful life	
			Poor - replacen	nent required	
Additional comme	ents:				

Section 12: GWX System - Nanofiltration (NF) or Reverse Osmosis (RO) Membrane

☐ Section is Not Applicable to this System.					
What type(s) of membranes are used? Nanofiltration (NF) Reverse Os	smosis (RO)				
Membrane model #					
What is the recovery rate (%)? What is the reject rate (%)?	?				
How many sealed vessels/ modules?					
How many membrane elements in each vessel/ module?					
Is there an isolation valve for each vessel/ module?	Yes No N/A				
Are there pressure gauges on influent & effluent piping for each vessel/ module?	Yes No N/A				
Does the concentrate/ reject piping rise after the final stage to prevent air locking and draining after the shutdown flush?	Yes No N/A				
Are there sampling taps for: permeate	Yes No N/A				
Are there sampling taps for: concentrate/ reject	☐ Yes ☐ No ☐ N/A				
Are there sampling taps for: blended water	☐ Yes ☐ No ☐ N/A				
Are there sampling taps for: individual vessels	☐ Yes ☐ No ☐ N/A				
Are the permeate, concentrate/ reject, by-pass metered? permeate concentrate concentrate concentrate concentrate.	oncentrate by-pass				
Is there online conductivity monitoring?					
Is there online turbidity monitoring?					
Is there online pH monitoring?	Yes No N/A				
Is an antiscalant added to the influent water to reduce fouling?	Yes No N/A				
If yes, list chemical and dosage.					
Is an acid solution added to reduce pH prior to the membrane?	☐ Yes ☐ No ☐ N/A				
f yes, which type of acid solution is used?					
What method is used to stabilize the permeate water?					
blending					
pH adjustment using sodium hydroxide (caustic soda)					
alkalinity & pH adjustment using sodium carbonate (soda ash)					
☐ limestone contactor					
degasification or air stripping to remove carbon dioxide					

Section 12: GWX System - Nanofiltration (NF) or Reverse Osmosis (RO) Membrane

☐ Section is Not Applicable to this System.					
Are the alkalinity and pH levels of the finished water suitable for distribution Yes No to limit corrosion?					
Is a permeate flush done after each shut-down?	☐ Yes ☐ No	□ N/A			
Is there a Clean-In-Place (CIP) unit for cleaning the membrane to limit fouling and scaling?	☐ Yes ☐ No	□ N/A			
If yes, list the cleaning chemicals.					
Are all treatment and cleaning chemicals certified to NSF Standard 60?	☐ Yes ☐ No	□ N/A			
Is the CIP unit equipped with a heater to heat the cleaning water?	☐ Yes ☐ No	□ N/A			
Have rules been established for initiating a membrane cleaning?	☐ Yes ☐ No	□ N/A			
What triggers a chemical CIP membrane cleaning?					
☐ Run Time ☐ Transmembrane Pressure (TMP) ☐ Flow reduction ☐ Initial Approximately how often is a CIP performed?	ated manually O	perator			
How is the concentrate/ reject	ng tank or septic	system			
□ N/A □ Discharged to environment □ Other	:				
If the concentrate or CIP waste disposal is to sewer or drain, is there an air gap? (i.e. there is no direct connection to avoid backflow)	Yes No	□ N/A			
Is there a pre-filter?	☐ Yes ☐ No	□ N/A			
If yes, specify pore size in microns.					
Are there pressure gauges on the inlet and outlet of the pre-filter?					
Is there redundancy to ensure water demands can be met during shut-downs Such as cleanings? (i.e. dual trains, extra modules, treated water storage)					
What types of monitors or indicators are provided for the membrane unit?					
☐ Run Time ☐ Transmembrane Pressure (TMP) ☐ Pressure ☐ Temperature					
What alarms are provided for the membrane unit?					
☐ Low feed pressure ☐ Low feed flow rate					
Other: Other:					

Section 12: GWX System - Nanofiltration (NF) or Reverse Osmosis (RO) Membrane

☐ Section is Not	☐ Section is Not Applicable to this System.				
	Was the membrane system installed to achieve compliance with specific ☐ Yes ☐ No ☐ N/A water quality standard(s) or guideline(s)?				
	What was the level (i.e. mg/L) in the raw and treated water in the most recent chemistry report for the parameter required to achieve compliance with a water quality standard(s)?				
parameter:		raw:		treated:	
What is the removal	rate (%) for the par	rameter?			
Is the expected remo	oval rate (%) being	achieved?		☐ Yes ☐ No	□ N/A
parameter:		raw:		treated:	
What is the removal	rate (%) for the par	rameter?			
Is the expected remo	oval rate (%) being	achieved?		Yes No	□ N/A
parameter:		raw:		treated:	
What is the removal	I rate (%) for the par	rameter?			
Is the expected remo	oval rate (%) being	achieved?		Yes No	□ N/A
parameter:		raw:		treated:	
What is the removal	I rate (%) for the par	rameter?			
Is the expected remo	oval rate (%) being	achieved?		Yes No	
What is the average	age (years) of the f	filtration equ	uipment?		
Filtration					
What is the general	condition of the filtra	ation equipr	ment? Good		
			☐ Fair - ne	earing end of useful life	
			Poor - re	eplacement required	
Additional comment	:s:				

Section 13: GWX System - Slow Sand/ Biological Filtration

Section is Not Applicable to this System					
Is the rated capacity of the filters able to meet peak or maximum day demands				☐ No	□ N/A
What is the capacity of the filters? Units.					
What is the peak or maximum day demand on the	Las water evetem2 Units				
What is the peak or maximum day demand on the	ie water system? Offits.				
Are there two filter beds each with independent to allow for cleaning and repairing?	biological layers		☐ Yes	☐ No	□ N/A
Is the biological layer scraped?			☐ Yes	☐ No	□ N/A
If yes, what is the frequency?					
Can the filters be visually inspected for maintena	ance and repair?		☐ Yes	☐ No	□ N/A
Are the filters regularly inspected?			☐ Yes	☐ No	□ N/A
Inspection frequency for the filters?					
Is there an ozone generator?			☐ Yes	☐ No	□ N/A
If yes, what is the source gas for the ozone gene	erator?				
☐ Compressed air ☐ Concentrated oxygen	☐ Liquid oxygen (LOX)				
What is the applied dosage range for the ozone	(mg/L)?				
Is the ozone feed rate or dosage adjusted seasonally?					
					N/A
In the arranging stand in a side-stream union a continuio					□ NI/A
Is the ozone injected in a sidestream using a venturi?				☐ No	□ N/A
Is an ozone contactor tank provided immediately after ozone injection? Is the ozone contactor equipped with an ozone destruction unit vented to				∐ No	□ N/A
the atmosphere?	destruction and vented to		∐ Yes	∐ No	☐ N/A
Is an ambient ozone monitor/ sensor located near the ozone equipment?			☐ Yes	☐ No	□ N/A
Were all ozone systems functional at the time of the inspection?			☐ Yes	☐ No	□ N/A
Is there a gravel roughing filter provided ahead of the slow sand filter?			☐ Yes	☐ No	□ N/A
How often (frequency) is the roughing filter back	washed?				
What is the trigger and trigger value to initiate a (time, head loss, turbidity)	backwash?				
Do the slow sand filters have at least 750 mm (3	0 inches) of sand?		☐ Yes	☐ No	□ N/A
Has the slow sand filter media ever been replaced or topped up?				☐ No	□ N/A
Can head loss be determined for each slow sand filter/s?				☐ No	□ N/A

Section 13: GWX System - Slow Sand/ Biological Filtration

Section is Not Applicable to this System.		
Are the slow sand filters backwashed?	Yes No	□ N/A
If yes, what is the frequency?		
What is the trigger and trigger value to initiate a backwash? (time, head loss, turbidity)		
Is the backwash source treated & unchlorinated water?	☐ Yes ☐ No	□ N/A
Is the filter equipped with filter-to-waste following backwash?	Yes No	□ N/A
Is the filter-to-waste period automatically controlled based on turbidity levels?	Yes No	□ N/A
If manually controlled, explain the trigger and trigger value for stopping the filter-i.e. turbidity levels, timed, etc	to-waste?	
Trigger to stop filter-to-waste:		
Are there Biological Activated Carbon (BAC) filters after the slow sand filters?	☐ Yes ☐ No	□ N/A
Are the BAC filters backwashed?	☐ Yes ☐ No	□ N/A
If yes, what is the frequency?		
Is the backwash source treated & unchlorinated water?	☐ Yes ☐ No	□ N/A
How is the backwash water from the biological filters disposed? ☐ N/A		
☐ Municipal sewer system ☐ Holding tank or septic system ☐ Othe	r:	
☐ Discharged to environment		
If the backwash disposal is to sewer or drain, is there an air gap? (i.e. there is no direct connection to avoid backflow)	Yes No	□ N/A
Is there a suitable sample tap for water leaving each of the filters?	☐ Yes ☐ No	□ N/A
What is the average age (years) of the filtration equipment?		
Filtration		
What is the general condition of the filtration equipment?		
☐ Fair - nearing e	nd of useful life	
☐ Poor - replacen	nent required	
Additional comments:		

Section 14: GWX System - Chlorination

☐ Section is Not Applicable to this System.				
What type of chlorine solution is used? Sodium hypochlorite fed directly from container				
☐ Diluted sodium hypochlorite				
☐ Solution from calcium hypochlorite p	owders or tablet	s		
☐ Unscented household bleach				
☐ On-site sodium hypochlorite generat	tion ("analyte")			
What is the make-model-brand name of the chlorine or generator used? (i.e. supplier label)				
Does the chlorine solution, or powder/ tablets, or salt carry NSF 60 certification?	Yes No	□ N/A		
Does the on-site sodium hypochlorite generator carry NSF 60 certification?	☐ Yes ☐ No	□ N/A		
Does the on-site sodium hypochlorite generator carry NSF 61 certification?	☐ Yes ☐ No	□ N/A		
Is an adequate amount of chlorine chemical kept on-hand at all times? (i.e. 30 days minimum)	Yes No	□ N/A		
Is the chlorine solution stored away from sunlight?	☐ Yes ☐ No	□ N/A		
Is the sodium hypochlorite solution used within 3 months of purchase?	☐ Yes ☐ No	□ N/A		
Are chlorine tanks stored over a spill tray?	Yes No	□ N/A		
Is the chlorine stored in a separate chemical storage room?	Yes No	□ N/A		
Is the system equipped with duty-standby chlorine pumps with automatic switchover in the case of pump failure?	Yes No	□ N/A		
Is there only a single feed chlorine pump?	☐ Yes ☐ No	□ N/A		
Is there a spare feed chlorine pump? (i.e. "shelf spare")	☐ Yes ☐ No	□ N/A		
Are critical spare parts kept on-hand to maintain the feed pump?	☐ Yes ☐ No	□ N/A		
What triggers operation of the chlorine feed? (i.e. raw water pump, reservoir level, etc)				
Is operation of the feed pump controlled by the raw water pump (fixed injection raby a flow meter (flow-paced injection rate)?	ate) or			
☐ N/A ☐ Raw water pump ☐ Flow meter ☐ Other				
Do feed pump settings suggest a properly sized feed pump?	☐ Yes ☐ No	□ N/A		

Section 14: GWX System - Chlorination

☐ Section is Not Applicable to this System.		
What type of chlorine residual test kit is used?		
☐ N/A ☐ Digital DPD colorimeter ☐ Colour wheel ☐ Unapproved unit	(i.e. pool kit)	
When was the equipment last calibrated?		
Is the system equipped with an online chlorine residual analyzer?	☐ Yes ☐ No	□ N/A
Explain where the analyzer sample draw water goes:		
Normally, what is the free chlorine residual (mg/L) of the outgoing water?		
Is chlorine gas (Cl2) used for chlorination?	☐ Yes ☐ No	□ N/A
If yes, what type of chlorine gas addition is used? 100# 150# cylinders	ton cylinders	□ N/A
Is there automatic changeover equipment to switch from one cylinder or bank of cylinders to another cylinder or bank of cylinders, to ensure that unchlorinated water is not allowed into the distribution system?	Yes No	□ N/A
Does gas chlorinator provide discharge at a point of positive pressure?	Yes No	□ N/A
Is the chemical feed equipment located in a separate room to reduce hazards and vapors?	Yes No	□ N/A
What is the average age (years) of the chlorination equipment?		
Chlorination		
What is the general condition of the chlorination equipment? Good		
☐ Fair - nearing	end of useful life	
Poor - replace	ement required	
Additional comments:		

Section 15: GWX System - Chlorine Dioxide

☐ Section is Not Applicable to this System.					
What type of chlorine dioxide feed system is used?					
☐ Generator: sodium chlorite & hydrochloric acid ☐ Powder/s ☐ Tablets	☐ Other				
What is the make-model-brand name of the chlorine dioxide feed system?					
Is an adequate amount of chlorine dioxide chemicals kept on-hand at all times? (i.e. 30 days minimum)	Yes No	□ N/A			
Are the chemicals stored in accordance with the supplier's instructions?	☐ Yes ☐ No	N/A			
Are chemicals stored over a spill tray?	☐ Yes ☐ No	□ N/A			
Is the chlorine dioxide stored in a separate chemical storage room?	☐ Yes ☐ No	□ N/A			
Is the system equipped with duty-standby chlorine dioxide pumps with automatic switchover in the case of pump failure?	Yes No	□ N/A			
Is there only a single feed chlorine dioxide pump?	☐ Yes ☐ No	□ N/A			
Is there a spare feed chlorine dioxide pump? (i.e. "shelf spare")	☐ Yes ☐ No	□ N/A			
Are critical spare parts kept on-hand to maintain the feed pump?	☐ Yes ☐ No	□ N/A			
What triggers operation of the chlorine dioxide feed? (i.e. raw water pump, reservoir level, etc)					
Is operation of the feed pump controlled by the raw water pump (fixed injection r by a flow meter (flow-paced injection rate)?	rate) or				
☐ N/A ☐ Raw water pump ☐ Flow meter ☐ Other					
Do feed pump settings suggest a properly sized feed pump?					
What type of chlorine dioxide test kit is used?					
☐ chlorine dioxide probe ☐ spectrophotomet	ric: lissamine gre	een B			
How often are <u>chlorine dioxide</u> levels monitored in the treated water?					
How often are <u>chlorite</u> levels monitored in the treated water?					
How often are <u>chlorate</u> levels monitored in the treated water?					
Are $\underline{\text{chlorite}}$ samples done on-site or at the laboratory? $\ \ \ \ \ \ \ \ \ \ \ \ \ $	ory				
Are $\underline{\text{chlorate}}$ samples done on-site or at the laboratory? $\ \ \ \ \ \ \ \ \ \ \ \ \ $	ory				
Are chlorite and chlorate levels below the health-based standards of 1 mg/L? Yes No N/A					

Section 15: GWX System - Chlorine Dioxide

_	olicable to this System.		
What is the average age (years) of the chlorine dioxide equipment?			
Chlorine Dioxide			
What is the general con	dition of the chlorine dio. equipment? Good		
	☐ Fair - nearing end of useful life		
	☐ Poor - replacement required

Section 16: GWX System - Other Treatment Chemicals (excluding chlorine/ dioxide)

☐ Section is Not Applicable to this System.				
Chemical Name/s	Dosage (mg/L)			
Chemical #1				
Chemical #2				
Chemical #2				
Chemical #3				
Chemical #4				
Chemical #4				
Chemical #5				
Are all chemicals that may come into contact with the potable water certified to NSF Standard 60?	Yes No N/A			
Is an adequate amount of treatment chemicals	Yes No N/A			
kept on-hand at all times? (i.e. 30 days minimum)				
Are the chemicals stored in accordance with the supplier's instructions?	Yes No N/A			
Are chemical tanks stored over a spill tray?	Yes No N/A			
Is the chemicals stored in a separate chemical storage room?	☐ Yes ☐ No ☐ N/A			
Is the system equipped with duty-standby chemical pumps with automatic switchover in the case of pump failure?	☐ Yes ☐ No ☐ N/A			
Is there only a single feed chemical pump?	☐ Yes ☐ No ☐ N/A			
Is there a spare feed chemical pump? (i.e. "shelf spare")	☐ Yes ☐ No ☐ N/A			
Are critical spare parts kept on-hand to maintain the feed pump?	☐ Yes ☐ No ☐ N/A			
What triggers operation of the chemical feeds? (i.e. raw water pump, reservoir level, etc)				
Is operation of the chemical pumps controlled by the raw water pump (fixed injection rate) or by a flow meter (flow-paced injection rate)?				
☐ N/A ☐ Raw water pump ☐ Flow meter ☐ Other				
Do feed pump settings suggest properly sized feed pumps?				

Section 16: GWX System - Other Treatment Chemicals (excluding chlorine/ dioxide)

Section is Not Applicable to this System. What is the average age (years) of the chemical equipment?				
What is the general condition of the chemical equipment?		dition of the chemical equipment	? Good	
			☐ Fair - nearing end of useful life	
☐ Poor - replacement required				
Additional commo	ents:			

Section 17: GWX System - UV Disinfection

☐ Section is Not Applicable to this System.			
Are the UV units certified to NSF Standard 55 Class A?	☐ Yes	☐ No	□ N/A
Does the unit provide a minimum dosage of 40 mJ/cm ² ?	☐ Yes	☐ No	□ N/A
What is the make-model-brand name of the UV units?			
How many UV units are used?			
Is the UV disinfection system equipped with Uninterruptible Power Supply (UPS) for low power events like brown-outs?	Yes	☐ No	□ N/A
Is the system equipped with a minimum 5 micron cartridge pre-filter or another type of pre-filter, such as iron filter?	Yes	☐ No	□ N/A
Have the units been installed in the right orientation (horizontal or vertical) based on the manufacturer's specifications?	Yes	☐ No	□ N/A
Is there a by-pass around the UV disinfection system that could allow un-disinfected water to be sent to distribution or taps?	Yes	☐ No	□ N/A
Are these by-passes tagged or labelled?	☐ Yes	☐ No	□ N/A
Are there procedures for activating by-passes including DWO notification?	☐ Yes	☐ No	□ N/A
Are there isolation valves before or after the UV units?	☐ Yes	☐ No	□ N/A
Are proper procedures being followed to clean the sleeve and sensor?	☐ Yes	☐ No	□ N/A
How often are the sleeves cleaned?			
Are UV bulbs being changed at least annually?	Yes	☐ No	□ N/A
Is there a spare UV bulb available? (i.e. "shelf spare")	☐ Yes	☐ No	□ N/A
Are the UV sensors being calibrated once per year, or as per manufacturer's requirements, or when an unresolved alarm occurs?	☐ Yes	☐ No	□ N/A
UV system or sensor checked by the equipment supplier in the last year?	☐ Yes	☐ No	□ N/A
Has Operator or supplier had to replace sensors?	☐ Yes	☐ No	□ N/A
What is the usual UVT level (%), or at the time of the inspection?			
Have the UV units experienced ongoing or frequent alarms suggesting an issue with the water quality (UVT level) or the sensor?	☐ Yes	☐ No	□ N/A
Does the UV unit have an automatic shut-off (i.e. solenoid valve) that shuts off the water supply if there is a UV alarm?	☐ Yes	☐ No	□ N/A
How frequent are UV alarms? ☐ no alarms (haven't had any) ☐ infrequent (i	.e. bulb	change (only)
frequently (i.e. weekly) - need to clean sleeve or sensor issues			
constantly (i.e. daily or anytime UV runs) - cleaning only resolves issues for a	short pe	eriod of t	ime
What kind of alarms? \[\sum N/A \] visual \[\sum audible \sum sent to computer \] Check all that apply.	☐ senf	t to cellp	hone
other other			

Section 17: GWX System - UV Disinfection

Additional comments:		

Section 18: GWX System - Treated Water Storage in Aboveground Tank(s)

☐ Section is Not Applicable to this System	1.			
What type of tank is used to store treated water before it is distributed? (Note: Pressure or hydropneumatic tanks with a single inlet/outlet pipe meant to reduce pump cycling are not considered storage tanks.)				
☐ flow-through pressurized tank/s ☐ atmosp	heric tank/s (poly) 🔲 other	er:		
What is the total volume of the tank/s? Units.				
How many tanks? List # and each volume.				
For atmospheric tanks: What is the total volume of the tank/s based on the lowest operating level? Units.				
Are the tanks in series (flow through one to and	ther) or parallel (separate f	lows)?		
	ks in series 🔲 tanks in p	arallel		
What is the tank material?	polyethylene (PE)	☐ fibreglass (FRP)		
	epoxy-coated steel	ther:		
Is the tank material or interior tank coating certipotable water system? (i.e. NSF 61 or FDA app		Yes No N/A		
What is the purpose of the water storage? Check all that apply.	to meet peak demands [chlorine contact time		
Check all that apply.	fire protection [other		
Storage tanks sized to meet peak demands?		Yes No N/A		
Storage tanks sized for at least 20 minutes chloridates and size of the storage tanks sized for at least 20 minutes chloridates and size of the size o	rine contact time?	Yes No N/A		
		don't know		
Storage tanks sized for fire protection?		Yes No N/A		
If no for fire protection, do the tanks provide at I (ADD) and less than 3 ADD of storage?	east 1 Average Day Demar	nd Yes No N/A		
What is the peak hourly flow rate? Units.				
What is the hydraulic retention time at the estimated peak hourly flow rate when the tanks are at their lowest operating level (atmospheric tanks) or at their normal full volume (pressurized tanks)? (Divide the volume from above by the peak hourly flow rate from above. Convert to same units.)				
Retention time: (i.e. 2.50 hours or 150 minutes)				

Section 18: GWX System - Treated Water Storage in Aboveground Tank(s)

☐ Section is Not Applicable to this System.		
The following table is taken from the "Filtration and Disinfection Log the Office of Drinking Water. This document is available online.	Reduction Credits	s" document from
Table 1: Baffling Factors for Water Storage Systems.		
Storage System Configuration:	Baffling Factor:	(This System)
Hydropneumatic tank with single inlet and outlet	no contact time	☐ Yes ☐ No
Single unbaffled retention tank; or multiple tanks in parallel	0.1	☐ Yes ☐ No
Two storage tanks in series	0.2	☐ Yes ☐ No
Three or more storage tanks in series	0.3 - 0.4	☐ Yes ☐ No
Baffled tank or baffled reservoir cell	0.3 - 0.6	Yes No
Based on the above table, what is the baffle factor for this system:		
What is the effective chlorine contact time? (Multiply the retention time from previous page by the baffle factor from the from previous page by the baffle factor from the following page by the baffle factor from the fact	om above.)	
Effective chlorine contact time: (i.e. 25 minutes)		
Storage tanks sized for at least 20 minutes <u>effective</u> chlorine contact	time?	Yes No N/A
		don't know
For atmospheric tanks, are the tanks equipped with level sensors for pump operation?		Yes No N/A
☐ floats ☐ pressure sensors ☐ ultrasonic sensing system	other (contac	ct probes)
Are the tanks accessible for visual inspection?		Yes No N/A
Are the tanks equipped with access or inspection hatches?		Yes No N/A
Are the tanks regularly <u>inspected</u> ?		Yes No N/A
Last inspected or inspection frequency:		
Are the tanks regularly <u>cleaned</u> and <u>disinfected</u> ?		Yes No N/A
Last cleaned or cleaning frequency:		

Section 18: GWX System - Treated Water Storage in Aboveground Tank(s)

☐ Section is Not Applicable to this System.		
Are the inlet and outlet pipes located to minimize the chance of water short-circuiting through the tanks and leading to water stagnation?	Yes No	□ N/A
Is the pump intake line properly sealed and located at least 150 mm (6 inches) above the bottom of the tank?	Yes No	□ N/A
Can individual tanks be isolated for inspection or maintenance?; without interrupting water service or interrupting chlorine contact time.	Yes No	□ N/A
Are pumps connected to multiple tanks to allow for isolation?	☐ Yes ☐ No	□ N/A
Are all openings sealed watertight?	☐ Yes ☐ No	□ N/A
Are all vents, overflows, and drain lines equipped with screens?	Yes No	□ N/A
Are all vents, overflows, and drain lines located to avoid backflow or run-off?	Yes No	□ N/A
If the tanks are located outside the building:		
Are the tanks protected from vandalism (fenced area or locked hatches)?	Yes No	□ N/A
Are the tanks protected from direct sunlight (opaque or covered?)	Yes No	□ N/A

Section 21: GWX System - Distribution System (not intended for a building plumbing system)

☐ Section is Not Applicable to this System.						
Are there up-to-date maps of the distribution system indicating locations of: service connections, valves, flush-outs, hydrants, etc	Yes	☐ No	□ N/A			
What types of watermain materials exist in the distribution system? Check all that apply.						
☐ PVC (polyvinyl chloride) ☐ AC (asbestos cement) ☐ iron - cast						
☐ HDPE (high-density polyethylene) ☐ other ☐ iron - duct	ile					
Are watermains adequately sized? (i.e. 50 mm (2 inch) if no fire protection, 150 mm (6 inch) if fire protection)	☐ Yes	☐ No	□ N/A			
Are watermains adequate pressure rating? (i.e. minimum 100 psi or 690 kPa)	☐ Yes	☐ No	□ N/A			
Is adequate at-tap pressure of 30-to-60 psi (200-to-400 kPa) maintained in the distribution system at all times?	☐ Yes	☐ No	□ N/A			
Does the system have a watermain replacement or renewal strategy?	Yes	☐ No	□ N/A			
Are a set of standards available for <u>new</u> construction?; reference to Manitoba Water Services Board (MWSB) or	☐ Yes	☐ No	□ N/A			
City of Winnipeg standard construction specifications or similar, to ensure proper materials and construction procedures are followed?						
Have minimum design and construction standards been established for new service connections?	☐ Yes	☐ No	□ N/A			
Is all <u>new</u> construction inspected to meet these requirements?	☐ Yes	☐ No	□ N/A			
Are all <u>new</u> watermains, service lines, and related equipment CSA or NSF certified for use in potable water systems?	☐ Yes	☐ No	□ N/A			
Are all <u>new</u> watermains and water lines disinfected as per AWWA, MWSB, or City of Winnipeg disinfection standards including	☐ Yes	☐ No	□ N/A			
confirmatory bacterial testing before placed into service?						
If piped sewer is present, is there at least 3 m (10 feet) horizontal distance separation between watermains and sewer mains, where they run parallel?	☐ Yes	☐ No	□ N/A			
If watermains are closer than 3 m (10 feet) from sewer mains are the watermains vertically above the sewer mains?	☐ Yes	☐ No	□ N/A			
If yes, do the watermains have a vertical distance separation at least 0.45 m (18 inches)?	☐ Yes	☐ No	□ N/A			
If watermains cross: sewer mains, raw or other non-potable water lines, oil or gas pipelines, etc is the watermain above at least 0.45 m (18 inches)?	☐ Yes	☐ No	□ N/A			
Are watermains protected from damage by being buried with at least 2.4 m (8 feet) cover for year-round systems or 0.45 m (18 inches) for seasonal?	Yes	☐ No	□ N/A			
Has the distribution system had any issues with frozen service lines?	☐ Yes	☐ No	□ N/A			
Are "bleeder" lines or valves used to prevent frozen service lines? (These are used in some northern communities.)	Yes	 ☐ No	□ N/A			

Section 21: GWX System - Distribution System (not intended for a building plumbing system)

Are air relief valves within the distribution system located aboveground?		☐ Yes	☐ No	□ N/A				
	Are air relief valves within the distribution system located aboveground?	☐ Yes	☐ No	□ N/A				

Section 21: GWX System - Distribution System (not intended for a building plumbing system)

	_	•		• • • •	• .	
☐ Section is No	ot App	olicable to this System.				
Are there periodic changes in treated water quality in the distribution system?						
Do the distribution well operated and	☐ Yes ☐ No	□ N/A				
Do the distribution well operated and	☐ Yes ☐ No	□ N/A				
Do the records su	ggest	any specific water quality issues?		Yes No	□ N/A	
If yes, please exp						
What is the average	ge age	e (years) of the distribution system?				
Distribution						
What is the genera	al con	dition of the distribution system?	Good			
			☐ Fair - nearing e	nd of useful life		
			Poor - replacem	nent required		
Additional comme	ents:					
1						

Section 22: GWX System - Bulk Fill/ Truck Fill/ Pail Fill

☐ Section is No	ot App	olicable to this System.		
Does the bulk/ tru	ck/ pa	il fill have appropriate backflov	w prevention?	Yes No N/A
If yes, what type of	of back	flow prevention is used? Che	ck all that apply.	other:
☐ backflow preve	ention	assembly: double check valve	e plus siphon break	
☐ backflow preve	ention	assembly: reduced pressure	principle	
hose bib vacuu	um bre	eaker (only allowed on pail fill)		
☐ air gap				
•		with appropriate signage indicates are allowed to be filled?	ating that only	Yes No N/A
Is access to the fil	I statio	on limited? (i.e. locked, FOB e	lectronic key, card swipe) Yes No N/A
Is there a flow me	ter tha	at monitors water usage (volun	nes) at the fill station?	Yes No N/A
Is there a separate	e or d	edicated pump for the fill station	on?	☐ Yes ☐ No ☐ N/A
				☐ No - combo pump
Is the hose length	such	that it is off the ground at leas	t 1 m (3 feet)?	☐ Yes ☐ No ☐ N/A
What is the average	ge age	e (years) of the fill station equi	pment?	
Fill Station				
What is the gener	al con	dition of the fill station?	☐ Good	
			Fair - nearing	end of useful life
			Poor - replace	ement required
Additional comme	ents:			

Section 23: GWX System - Operation and Maintenance (O&M)

Is the water system checked on a daily basis when it is operating?	Yes	☐ No	□ N/A
How many hours per day does the water treatment system run?			
How many hours per day does the pump/s run?			
How many hours per day does the operator spend on the water system?			
Is there a back-up operator for the water system?	☐ Yes	☐ No	□ N/A
Has the water treatment facility and/or water distribution system been classified under the operator certification program?	☐ Yes	☐ No	□ N/A
water treatment facility:			
water distribution system: small system 1 2 3 4			
Have any operators been classified under the operator certification program?	☐ Yes	☐ No	□ N/A
Is there an up-to-date emergency contact list?	Yes	☐ No	□ N/A
Is there a list of critical water users (i.e. hospitals, personal care homes, schools) to be contacted during an emergency?	☐ Yes	☐ No	□ N/A
Is there a procedure for emergency notification of water users if a water quality issue occurs or there is an advisory?	☐ Yes	☐ No	□ N/A
Is there a plan for obtaining water on an emergency basis?	☐ Yes	☐ No	□ N/A
If the system is operated on a seasonal basis, are Office of Drinking Water procedures followed for start-up and shut-down of the water system?	☐ Yes	☐ No	□ N/A
Have written procedures been developed for key activities such as: backwashing filters, watermain repairs, etc?	☐ Yes	☐ No	□ N/A
Is there an up-to-date process schematic or water system drawing available?	☐ Yes	☐ No	□ N/A
Is there an up-to-date O&M manual available with equipment specifications, product sheets, supplier information, O&M instructions, troubleshooting?	☐ Yes	☐ No	□ N/A
Has the operator received training from the equipment supplier on O&M of critical water system components such as treatment equipment, controls, etc?	☐ Yes	☐ No	□ N/A
Is there a maintenance log for recording preventive maintenance, repairs, etc?	☐ Yes	☐ No	□ N/A
Are water system records kept for a minimum of 2 years?	☐ Yes	☐ No	□ N/A
Are instruments regularly calibrated, in particular, water testing equipment to ensure reliable test results?	☐ Yes	☐ No	□ N/A
Are extra bacterial sample bottles kept on-hand for emergency purposes?	☐ Yes	☐ No	□ N/A
Is the system in compliance with the sampling parameters and frequency listed in the Operating Licence?	☐ Yes	☐ No	□ N/A

Section 23: GWX System - Operation and Maintenance (O&M)

Additional comments:	

Section 24: GWX - Arsenic Removal by Filtration Using Disposable Media

☐ Section is Not Applicable to thi	s System.			
Is the rated capacity of the filters able	nands?	Yes No	□ N/A	
What is the treatment capacity of the	filters? Units.			
What is the peak or maximum day de	mand on the water system? Units.			
What type(s) of disposable media is u	sed for arsenic removal?	Oth	er:	
Granular Ferric Hydroxide (i.e. Ba	yoxide, AdEdge)			
☐ Titanium Oxide (i.e. MetSorb)				
☐ Activated Alumina				
Does the disposable media carry NSF	certification?		☐ Yes ☐ No	□ N/A
Can the filters be visually inspected for	or maintenance and repair?		Yes No	□ N/A
Are the filters regularly inspected?			☐ Yes ☐ No	□ N/A
Inspection frequency for the filters?				
What is the trigger to replace the med	dia? (time, pressure loss, turbidity)			
What is the expected life of the media				
Has the filter media ever been replace		☐ Yes ☐ No	□ N/A	
If yes, how long ago?				
Are there pressure gauges on the inle	et and outlet of the filter?		☐ Yes ☐ No	□ N/A
Are the filters regularly backwashed?		☐ Yes ☐ No	□ N/A	
Backwash frequency for the filters?				
What is the trigger to initiate a backwa	ash? (time, pressure loss, turbidity)			
What is the source of backwash wate	r? Filtered and chlorinated water	er		
	☐ Filtered and unchlorinated w	ater [Raw water	
How is the backwash disposed of?				
☐ Municipal sewer system	☐ Holding tank or septic system	☐ Oth	er:	
	☐ Discharged to environment			
If the backwash disposal is to sewer of (i.e. there is no direct connection to a		☐ Yes ☐ No	□ N/A	

Section 24: GWX - Arsenic Removal by Filtration Using Disposable Media

$\hfill \square$ Section is Not	Applicable to	this System.					
Is there a suitable sa	ample tap for w	ater leaving the filter	rs?		☐ Yes [No	□ N/A
Are arsenic levels regularly monitored?					☐ Yes [☐ No	□ N/A
What was the arsen	ic (mg/L) level	in the raw and treate	d water in the mo	st recer	nt chemistr	y repo	rt?
Ars	Arsenic - raw			eated			
What is the remova	I rate (%) for ar	senic?					
Is the filtration syste	m achieving th	e expected removal	of arsenic?		☐ Yes [] No	□ N/A
What is the average	age (years) of	the filtration equipm	ent?				
Filtration							
What is the general	condition of the	e filtration equipment	? Good				
			☐ Fair - ne	earing e	nd of usefu	ıl life	
			Poor - r	eplacen	nent require	ed
